THE NATIONAL INDICATIVE PROGRAMMING (NIP) 2004-6

1 Priority: Contributing to the development of selected rural regions

Context and justification:
The three core strategic planning documents (Vision 2020, 6th NDP and the Strategic Economic Plan) set an ambitious framework with the aim of achieving equitable distribution of economic benefits, employment opportunities, social conditions and infrastructure development throughout the country by the year 2020.

The Government of the Maldives is committed to pursuing the concept of regional development and recognises that infrastructure development must be channelled to selected areas.

Objectives
Support the establishment of regional growth centres.

Description of the action
To support the process of establishing regional growth centres that will act as a development framework for co-ordinating both private and public investment in providing social and physical infrastructure, start institutional strengthening of communities and local administration, and begin the process of decentralising the Governments regional management and development planning system.

Expected results
Decentralised Regional Development Management Offices built, established and staffed with local administrative staff who have received adequate training, facilities, and capacity building to be able to implement a regional participatory planning process that can identify, prioritise and implement a regional development plan.

Establishment of vigorous island and atoll development committees able to fully participate in community development activities, undertake micro-project programmes, begin income generation and poverty reduction activities. This process should be particularily focussed on the empowerment of women.

Activities
Establishment, staffing, and equipping of Regional Development Management Offices. Human resource training in regional development, land use and rural planning, environment protection including promotion of renewable energies, participatory planning processes, project preparation, income generation and poverty reduction activities, management skills in budgeting, financial control and annual work programmes.

Preparation of a long term development plan for the region with detailed and carefully prepared prioritised local budgets, identified projects for funding by either government, aid donors, or private investors, and a clear strategy for economic and social development for the region with all necessary environmental impact assessment (EIA) planning having been undertaken. The plans will detail environmentally sound infrastructure improvements required in communication and transport links between the regional
centres and Male, either by sea or air, as well as between the regional centres and the other atolls and islands in the region. Regional infrastructure needs for education, health, sanitation, potable water sources, waste management facilities, and renewable energies will be clearly identified, especially the social facilities and vocational education requirements needed to support any planned economic or expected employment opportunities. Care will be needed to ensure that any proposed regional administrative system is acceptable to the central government and the participatory community based planning methods used are acceptable to both the traditional atoll societies as well as the political leaders in central government.

A clear overall environmental protection plan for the region with sound strategies for each of the atolls and their respective islands will be prepared. These environmental protection plans will fully take into account any likely environmental impact that will be caused by any proposed infra-structural development activity and will also take into account issues of sustainability of any proposed action. Furthermore, such plan shall examine the use renewable energies.

Moreover, these plans will also examine the possibilities to develop learning by doing adaptive capacity, spanning human, institutional and systemic components to reduce the vulnerability of the population to climate change and climate variability. This may include the sharing of information on climate variability and forecasting, and assisting the government in developing an early warning system that would prepare the country to implement response measures to effectively confront and manage natural disasters.

Decentralised local government in the Maldives will become more of a reality with strengthened development committees and women’s committees playing a more active role in civil administration. Economic opportunities will increase and diversify with islands in the region looking to the regional centre for social and economic support.

The progress and impact of the activities described above will be measured through regular feedback, monitoring and evaluation.

**Implementation**

Multi-annual regional development plans will begin to be developed by a medium-term team of European TAs with local counterparts, consisting of regional planners, an infrastructure engineer, a transport engineer, land use planners, a local government specialist and a SME specialist, supported by short-term inputs from a gender specialist, a rural development specialist, an environmental specialist, a sociologist, a GIS (geographic information system) expert, a marine fishery specialist, and a tourism expert. Based at the identified regional centre, the team should begin a participatory planning process to identify the priority needs for both social, as well as economic development. The team should identify institutional strengthening needs, capacity building requirements and training needs for the local administration, communities, and administrators and begin the training programme.

Based upon the experience of other aid donor projects, begin the establishment of Regional Development Management Offices, carry out training for institutional strengthening and capacity building for local administrative staff, island, and women’s development committees, involving local chiefs and village officials. Strengthen regional
planning, land use planning, and GIS facilities at the Regional Office level. Improve use of local funds, local planning and establish local development priorities. On a pilot basis, implement and fund selected micro-projects and development activities based on local initiatives. Particular focus in this process should be laid on projects which target environment protection and/or that help the population to adjust to harmful effects caused by climate change.

In the region, the plan should identify agricultural development and market potentials, highlight possibilities for tourism expansion; identify sustainable and marketable marine products, clarify communication and transport needs, identify private initiatives and sources of commercial funding, as well as technical education development. The environmental sustainability of such interventions will be carefully examined. The plan will also look at renewable energy sources such as solar, wind or wave power. Where there are key bottlenecks and problems in the region to begin to implement a programme infrastructure improvement in the fields of communication, transport, tourism, fishing and social improvements.

The ADB Regional Development Project is designed to improve the living conditions of the people in the Northern Development Region and Southern Development Region and will be a catalyst for economic growth. It is the first major initiative to implement the Government policy of equitable development and is financed through the Asian Development Bank with co-finance from the Islamic Development Bank. The EC might decide to collaborate with the ADB and co-finance the project. The synergy with a prominent donor on the spot such as the ADB is advisable given the modest level of EC intervention and the fact that there is no EC Delegation in the Maldives but at considerable distance in Delhi.

**Performance/Outcome Indicators (disaggregated by gender)**

The main performance indicator of the project will be a noticeable reduction of migration flows from the targeted region to Malé by the end of the project period, i.e. 2006, others include:

- Regional Development Centre established, equipped and staffed. Organisational structure drawn up and number of posts occupied and/or vacant.
- Regional staff actively involved with the assistance of local communities in preparing regional multi-annual plans with development priorities identified, and public and private funding opportunities highlighted.
- Number of training courses, number of participants in training courses.
- Multi-annual regional plan encompassing environment, land, gender, economics, social, education, communication, tourism, transport, agriculture drawn up.
- Levels of public and private investment.
- Number of people living below poverty line, income levels.
- Local communities undertaking micro-projects, self-help initiatives, community planning, and forming SMEs. Number of micro-projects carried out, SMEs founded, self-help initiatives set-up, number of women participating in these undertakings, ownership of assets.
• Regional administration preparing, carrying out, controlling, and monitoring regional funds and budgets. Regional budget prepared, carried out, controlled and regional funds and budgets monitored.
• Behavioural change of stakeholders. Local committees set up, number of participants, participation of women.

Risks and Conditionalities

Despite the commitment of the government to decentralisation there might be a risk that central government officials will be reluctant to allow a true decentralised form of local government to take shape. At the same time traditional societies in the atolls may find the rate of change too fast to be acceptable to them. These risks can be counteracted by ensuring all the main stakeholders including the communities at the island level are fully consulted at all stages of the project and that the community based participatory planning process fully takes into account the wishes and comments of all special interest groups.

If the EC funds are used to co-finance the ADB led regional development project risks are low since the project has been running successfully for several years.

Period of implementation

2 Priority: Enhancing Trade Capacity and Economic Development

Context and justification:

The needs and concerns of developing countries are at the heart of the Doha Ministerial Declaration. Members committed themselves to ensuring that WTO technical assistance focuses, on a priority basis, on assisting developing countries with implementing existing WTO obligations, as well as on increasing their capacity to participate more effectively in future multilateral trade negotiations.

The Maldives’ government has requested technical assistance in preparing their offer in the framework of the DDA negotiations. The non-resident status of the Maldives puts the Government in a particularly difficult situation in terms of following, and contributing to, the ongoing negotiations.

Furthermore, as a result of the Maldives overall satisfactory development, it might graduate from its status as an LDC country in the near future. However, the state of the Maldives’ economy is fragile. Its main export products (mainly garments, fish, and canned fish) will lose preferential access to the EU market resulting in the levy of MFN duties. This, compounded by high transportation costs, will reduce Maldives’ competitiveness even further.

Objectives

The capacity building for the DDA negotiations should equip Maldives for the negotiations in the WTO as agreed at the Fourth Ministerial Conference held in Doha, Qatar. Moreover, it will support the Maldives in its efforts to build up its regulatory, legislative, and institutional capacities in order to implement its WTO commitments.
Appropriate measures to ease the Maldives’ transition into the group of developing countries should be provided to help the Maldives overcome the negative side effects of losing preferential access to the EU market.

Description of the actions
Provide trade related technical assistance and capacity building. Help the country to diversify its exports and enhance its competitiveness in the fish sector.

Expected results
By enhancing its capacity, the Government of Maldives should be better equipped to take part in the Doha Development Round of international trade negotiations, adhere to its international commitments in terms of the new generation of trade issues (Biosafety regulations, SPS, Trade in Services) and support the export oriented sectors of the economy.

Activities
Among the actions that should be envisaged: 1) Putting at the disposal of the Maldives’ government expertise on a “as needed” basis to assist in analysing specific issues and requests, preparing offers and formulating negotiation positions, in particular in the services, agriculture, and fisheries areas. 2) Training of officials and awareness building among industry. 3) A competitiveness study related to selected economic sectors, the results of which would inform future economic policy at the national and regional levels.

The progress and impact of the activities eventually selected for implementation will be measured through regular feedback, monitoring and evaluation.

Implementation
A project identification mission should be sent to the Maldives in 2003. In order to optimise the use of the limited funds available, synergies should be sought with suitable organisations using the instruments already available or envisaged (e.g. new Asia Framework contract) for pursuing trade facilitation.

Performance/Outcome Indicators
To be decided in the light of mission findings.

Risks and Conditionalities
A potential constraint that could limit the full benefit of the above-mentioned activities could be the rather low level of manpower and capacity in the Government of the Maldives to absorb training and technical assistance.

Period of implementation

Estimated cost and duration of the two actions
€ 2 million to be spent over 2-3 years. Precise amounts in support of the two actions to be carried out will be determined in the identification and appraisal process.
A - Area and Population

The Maldives is a long and narrow archipelago of 26 natural atolls consisting of nearly 1,190 coral islands, located in the Indian Ocean. The country’s total land area is 300 Km²: 820 kilometres long from North to South, and 130 kilometres in breadth, at the widest point. The islands are widely scattered over a territorial ocean area of 859,300 square kilometres. Only 33 islands have a land area in excess of one square km, while just 3 islands (Gan in Laamu Atoll, Hithadhoo in Addu atoll, and Foammulah) have an area larger than 3 square km. In addition to being very small, all islands are low-lying. None have an elevation of more than 3 m above sea level and 80% of the total land area has a mean elevation of only 1 meter.

The population of the Maldives, estimated at 269,010 in 2000, is scattered over 199 islands. One third of all inhabited islands have fewer than 500 people. Only six islands have populations in excess of 3,000. No fewer than 144 islands (more than 70% of all islands) have less than 1,000 people. Inhabited islands are spread throughout the archipelago. The nation’s capital, Male is the most populous region with over 63,000 inhabitants. This distribution of the population gives Maldives an extremely dispersed and fragmented population with few parallels in the developing world.

B - Constitutional History

The first written constitution of the Maldives, proclaimed by Sultan Muhammad Shamsuddeen III and given Royal Assent on 22 December 1932, allowed for the governance of all citizens on the basis of equality and justice. It was largely based on customs, conventions, and traditional administrative practices. Several amendments were made to this first constitution. On 30 January 1940, seven years after its proclamation, the first written constitution was abolished, but within two years a new written constitution was formulated (23 April 1942).

After being ruled as a constitutional monarchy, the Maldives adopted a republican form of government on 1 January 1953. On 21 August 1953, the monarchy was restored.

The Sultanate rule ceased to exist with the declaration of the second Republic, following a public referendum held on 1 April 1968. The tenth constitution, favouring a Republican rule was formulated and proclaimed with the declaration of the second Republic on 11 November 1968 by President Ibrahim Nasir.

Ibrahim Nasir, Prime Minister under the pre-1968 sultanate, became President of the Republic and held office from 1968 to 1978. Nasir was succeeded by Maumoon Abdul Gayoom, who was elected President in 1978. President Gayoom is presently serving his fifth consecutive five-year term as president, which began on 11 November 1998.

Maumoon Abdul Gayoom, a former university lecturer and Maldivian ambassador to the United Nations (UN) was first elected as President in 1978.

The political situation in the Maldives has remained remarkably stable over the past two decades providing a conducive environment for development. One of the very few exceptions was 3 November 1988 when former Maldvian businessman Abdullah Luthufi led a sea-borne mercenary force of about 150 Sri Lankan Tamil separatists who invaded
Maldives and attempted to seize key government installations. The President of Maldives sought external assistance from a number of countries and the Indian Government responded swiftly in assisting the Maldives to repel the attack. They quickly suppressed the coup attempt and restored order. In September 1989, President Gayoom commuted to life imprisonment the death sentences imposed on twelve Sri Lankans and four Maldivians who participated in the attack. In November 1989, India withdrew by mutual agreement with the Maldives the last of the 160 troops who had remained in the Maldives at the request of the Government of Maldives. (Recast the Nov. 3rd incident as an overspill of Terrorism in Sri Lanka).

E - 2020 Vision Plan

President Gayoom explains the visions as follows:

- By the year 2020, the Maldives will be one of the top-ranking nations amongst middle-income developing countries.

- Democratic governance of the country will be further consolidated and the people will continue to enjoy justice, equality, the rule of law, peace and security.

- Gender equality will be a reality by the year 2020, with the active participation of both women and men in political, social and economic activities on an equal footing.

- Maldivians will demonstrate a higher degree of objectivity and rationality in both private and public life. They will adhere to a strong work ethic that emphasises responsibility and initiative. People will live in a more caring society, one in which familial ties are even stronger than at present.

- The youth of the nation will be fully committed to contribute to the nation's progress and prosperity. They will be able to get the opportunities that they need to achieve their full potential.

- By 2020, the Maldives will be a more urbanised country, providing satisfactory living conditions to all. The people will have greater awareness of and commitment to healthy lifestyles. Good quality medical care will be available to all citizens in the area in which they live, and will have easy access to a health insurance scheme that will enable them to meet their medical expenses.

- Maldivians will be able to take sufficient protective measures against the threats posed to the country as a result of global ecological degradation. They will be pursuing environmentally-friendly lifestyles with the aid of modern technology.

- By the year 2020, the Maldives will have established the most conducive conditions for brisk commerce and economic activity, and will have become the hub of regional free trade. The country will have a more diversified economy with export-oriented trade in services and industrial development.

- There will be equitable distribution of economic benefits and every citizen will have the opportunity for productive employment.

- These developments will place the Maldives among the top-ranking developing countries that have achieved medium level of development.

- An educated, knowledgeable and skilled citizenry is essential for making Vision 2020 a reality. Developing the competence of the people is therefore a top priority in shaping the desired course for the future that embraces the aspirations of the nation.

- Vision 2020 envisages that 10 years of formal schooling will be the minimum standard throughout the Maldives and good quality tertiary education will be well established in the country. A system for the provision of technical skills needed for achieving and sustaining social and economic development will also be established.

- By 2020, modern technology will be widely used in the Maldives, facilitating continued progress and providing modern conveniences to the people.
By the year 2020, the Maldives will be better equipped to play an active role in international affairs in the interests of protecting its independence and sovereignty. It will focus on maximising the interests of the Maldives in ways that are consistent with its national self-image and international norms of conduct.

Long-term strategic planning will be fundamental to achieving the targets that are set within the framework of Vision 2020. Such plans will include the protection and preservation of the basic ingredients of the Maldivian national identity, the diversification of the economy, and the acceleration of the pace of economic and social progress. At the same time, the legal framework and the administrative structure need to be developed and modernised.

F – Country Environmental Profile

The Maldives is party to the following Multilateral Environmental Agreements: Bio-diversity, Climate Change, Climate Change-Kyoto Protocol, Hazardous Wastes, Law of the Sea, Ozone Layer Protection.

The Sixth National Development Plan states the following objectives for environmental policy:

- Promote sustainable resource management through preservation of natural resources and bio-diversity.
- Minimise dangers to the natural resource base and environment due to economic development and the rapid population growth.
- Contribute to the international efforts to find solutions to global environment threats, especially those pertaining to the vulnerable Small Island Developing nations.
- Promote integrated planning and administrative practices by developing meaningful principles and procedures for sustainable resource use and environmental protection.

Domestic environmental action:

- The "Independent Maldives - Clean Maldives" initiative.
- The President of Maldives' "Green Leaf Award" for outstanding contribution towards environment protection, preservation and awareness-building.
- The President of Maldives' "Green Tourist Award".
- The "2 Million Tree Programme", initiated to make the Maldives one of the world's Greenest nations.
- The campaign to make Male the cleanest capital city in the world.
- A number of species (such as whales, turtles and dolphins) have been protected. In addition, 23 varieties of birds (including 5 species which are native to the Maldives) have also been protected. 25 marine sites (chosen for a number of reasons such as their underwater beauty, fragility and their unique bio-diversity) and 2 islands are also included in the list.
• To discourage the mining of coral and sand for reefs, duty incentives have been allocated on substitute products (mainly for use in the construction industry).

• Not only are tourism and fisheries the two major industries in the country, they are also inseparably linked to the marine environment. The Government strives to ensure that the development of both these crucial sectors are in harmony with the environment.
