Carbon Border Adjustment Mechanism

A new, green way of pricing carbon in imports to the EU

EU Commission, Brussels,
March 2023
European Green Deal

Whole economy approach:

- **A socially fair transition**: tackling inequality and energy poverty through climate action,
- **A competitive transition**: New opportunities through industrial and sectoral change
- **A green transition**: Protecting nature and increasing Europe’s natural carbon sink
Delivering the European Green Deal

- Innovation and investment
- NextGenerationEU
- Revenues from extensión and strengthening of ETS

- A sustainable EU in a sustainable world
- Global engagement and international cooperation is key to address the climate crisis
CBAM – Basic concepts
As the EU raises its climate ambition and differences in levels of ambition worldwide persist….

.. there is an increased risk of carbon leakage

CBAM addresses this increased risk, as an environmental measure in support of the fight against global climate change.
So, what is the aim of the CBAM?

- Prevent carbon leakage to ensure effectiveness of EU climate policy
- Contribute to decarbonisation globally and to reaching climate neutrality by 2050
- Complements and reinforces the EU ETS
And how do we do this?
Four key elements of design

Mirror EU carbon pricing through new mechanism for imports into EU

Comply with WTO and be fully in line with international trade rules

Addressed at companies, not countries, based on actual carbon content of imported goods.

Focus on carbon intensive sectors
CBAM at a glance

- Focusing on actual carbon content in goods, not targeting countries!

- Companies are subject to CBAM only on individual merits and taking into account:
  - Actual carbon content of the imported goods;
  - Level of free allocations of EU ETS allowances in the EU;
  - Carbon price effectively paid in country of production.

- Possible exemption due to participation/linking to EU ETS

- Companies buy and surrender certificates to cover carbon content via annual declarations
The EU Emissions Trading System (EU ETS) set an overall limit ("cap") on the GHG emissions for the sectors included (currently power, industry, aviation, from 2024 also maritime and from 2027/8 - new ETS 2 for buildings, road transport and small industry).

The cap is reduced each year by a set amount based on the reductions targets, ensuring that total emissions fall.

Within the cap, companies receive or buy emission allowances, which they can trade as needed.

Allowances are placed on the market either by auctioning or free allocation. Then they are traded on the secondary market or surrendered for compliance.
Carbon Price

- Equal carbon pricing
  - EU businesses pay a carbon price on their production in the EU
  - Imports will need to pay a carbon adjustment, corresponding to the price they would have paid if the goods had been produced under the EU’s carbon pricing rules (ETS).
  - The CBAM charge will be adjusted to reflect the level of EU ETS free allowances allocated to EU production of sectors in scope.

- No double pricing
  - If a non-EU producer can show that they have already paid a carbon price for the production of the imported goods in a third country, that amount can be deducted for the EU importer.
CBAM – Implementation
Sectors

- In the **first phase**:
  - CEMENT
  - IRON & STEEL
  - ALUMINIUM
  - FERTILISER
  - ELECTRICITY
  - HYDROGEN

- Includes some precursors and downstream products

- **Selected on the basis of 3 criteria:**
  - High risk of carbon leakage (High carbon emissions; High level of trade)
  - Covering more than >45% of CO2 emissions of ETS sectors
  - Practical feasibility

- In a **second stage**, extended to other sectors
Gradual implementation of CBAM

**Transitional phase**
*October 2023-December 2025*

- Monitoring and reporting
- Implementing rules to be adopted by the CBAM Committee

**Post-transitional phase**
*January 2026 onwards*

- Phase out of free allocation
- Phase in of CBAM

---

**Gradual phase-in**

to allow businesses to adjust

**Review**
*2025*

- Scope extension
- Indirect emissions
- Exports

Company production

Downstream

- In CBAM scope
- Not in CBAM scope
- Partially in CBAM scope
During the transitional phase shall be reported:

- Direct and Indirect emissions for all CBAM goods included in Annex I of the Regulation

During the definitive phase shall be reported:

- Direct emissions for all CBAM goods included in Annex I of the regulation
- Indirect emissions, for all CBAM goods except those that may receive indirect cost compensation under the EU ETS framework (Annex IA)

The Commission will work towards the extension of the list of goods for which indirect emissions shall be reported.
Obligation for a CBAM declarant

Transitional phase  
October 2023 - December 2025

- CBAM report containing the following:
  - Total quantity of goods imported during the preceding quarter
  - Total embedded direct and indirect emissions in those goods
  - The carbon price due in the country of origin for the embedded emissions

  ➔ Report to be submitted each quarter

Post transitional phase  
January 2026 onwards

- CBAM declaration containing the following:
  - Total quantity of goods imported during the preceding calendar year
  - Total embedded emissions in those goods
  - Emissions to be verified by EU accredited verifier
  - Total number of CBAM certificated to be surrendered
  - The carbon price effectively paid in the country of origin for the embedded emissions

  ➔ Declaration to be submitted each year
De Minimis Rule

CBAM shall not apply to:

- Goods imported in the customs territory which do not exceed EUR 150 per consignment as specified in Article 23 of Council Regulation (EC) No 1186/2009

- Goods contained in the personal luggage of travelers coming from a third country and that do not exceed EUR 150
Rules for Representatives

Importer

Importer is the CBAM declarant

No representation by others – Own import

Direct custom representative (Status: Customs Declarant)

Indirect custom representative (Status: Importer)

CBAM authorised declarant

Subject to CBAM obligations (status of authorized declarant + reports/declarations)
The Commission shall present 2 reports before the end of the transitional period:

1) **Containing an assessment on:**
   a) possibility to extend the scope
   b) criteria to be used to identify the goods to be included in Annex I of the CBAM regulation
   c) technical requirements for calculating embedded emissions for newly added goods
   d) progress made in international discussions regarding climate action
   e) governance system, including the administrative costs
   f) impact of CBAM on goods listed in Annex I imported from developing countries
   g) methodology for the calculation of indirect emissions

2) **Identifying products that are further down the value chain of the goods listed in Annex I**
Regular reports

1) Commission shall assess the impact of CBAM on:
   I. carbon leakage,
   II. sectors covered,
   III. the internal market,
   IV. Inflation
   V. effect on industries
   VI. international trade
   VII. least developed countries

   Additionally, as part of the same report, it shall also assess:
   I. the governance system
   II. the scope
   III. circumvention practices
   IV. application of penalties and aggregated information on the emissions intensity per country of origin for the products listed in Annex I

2) Commission shall assess CBAM effectiveness in addressing the carbon leakage risk for goods produced in the EU for export to third countries which do not apply the EU ETS or similar carbon pricing mechanism

   Report to be submitted every two years from the end of the transitional period

   Report to be submitted before 1 January 2028, as well as every two years thereafter
List of Implementing and Delegated Acts

**Implementing Acts**
- Art. 2(2) – Scope
- Art. 5(6) – Application for authorisation
- Art. 6(6) – CBAM declaration
- Art. 7(6) – Calculation of embedded emissions
- Art. 8(3) – Verification of embedded emissions
- Art. 9(4) – Carbon price paid in a third country
- Art. 14(6) – CBAM registry
- Art. 17(11) – Authorisation
- Art. 18(1) – Accreditation of verifiers
- Art. 21(3) – Price of CBAM certificates
- Art. 25(5) – Rules applicable to the importation of goods
- Art. 31(2) – Free allocation of allowances under the EU ETS and obligation to surrender CBAM certificates
- Art. 35(6) – Reporting obligation

**Delegated Acts**
- Art. 2(10 & 11) – Scope
- Art. 18(3) – Accreditation of verifiers
- Art. 20(3) – Sale of CBAM certificates
- Art. 27(6) – Circumvention
CBAM and global decarbonisation
CBAM is part of our international cooperation on climate actions

... climate action is urgent, so we need to act at all levels now

... starting with CBAM goes hand in hand with our engagement at international level
International cooperation

- CBAM can be complemented by bilateral, multilateral and international cooperation with third countries

- Establishment of a dialogue between countries with carbon pricing instruments (‘Climate Club’)
  - Building on OECD’s work under IFCMA

→ paving the way for ambitious climate policies and global carbon pricing
CBAM – an internationally open mechanism

- CBAM is open to decarbonisation efforts in third countries and favours international coordination thanks to a five-tier system:
  - Actual emissions methodology – CBAM is based on carbon content of the imported goods.
  - Deduction of the carbon price paid in country of production from the adjustment on imported goods.
  - Countries applying EU ETS or linked to it are excluded.
  - Special rules on electricity for countries whose electricity market is “coupled” with the EU internal market for electricity
Methodology to calculate CBAM obligations
The CBAM methodology
From installation to goods approach

- The scope of the ETS is based on installations carrying out activities leading to GHG emissions.
- The scope of the CBAM is based on “goods”.
- Therefore the CBAM methodology will translate ETS methods for the calculation of emissions at installation level into methods for imported goods.
- This means setting rules to narrow the system boundaries from production sites down to the level of goods.
- But a key difference between CBAM and ETS is the distinction simple and complex goods.
An example of simple and complex goods: iron and steel

- **Outside the scope of CBAM**
- **Precursors to steel under the CBAM scope**
  - Limestone
  - Iron ore
  - Coal
  - Coke
- **Steel goods under the CBAM scope**
  - Sinter
  - Hot metal
  - Semi finished (e.g. blooms, billets, Slabs)
  - Finished (e.g. tubes)
Verifiers

Accreditation

- Any person accredited in accordance with Commission Implementing Regulation (EU) 2018/2067 for a relevant group of activities shall be regarded as an accredited verifier under the CBAM regulation.
- A national accreditation body may on request accredit a person as a verifier

Role

- The verifiers shall:
  - prepare a verification report establishing the embedded emissions of CBAM goods
  - visit installations on-site
Calculation of the adjustment

Actual emissions of the installation producing imported product (actual tones of CO2 per tonne of product produced) x Emissions covered by free allocation under the EU ETS for the relevant product (tones of CO2 per tonne of product produced) = Total tonnes of imported product

Average weekly price of the EU ETS x Total tonnes of imported product = CBAM Obligation

Obligation paid in exporting country on the basis of equivalent carbon price applied in that country

Adjustment
Default values

• When actual emissions cannot be adequately determined, embedded emissions shall be determined by reference to default values expressed in tonnes of CO2eq per tonne of CBAM good produced.

• Default values shall be based on the average emission intensity of each exporting country for each good under the scope of the proposed CBAM regulation, except electricity. Subject to data restrictions groupings may be applied.

• Based on a top-down methodology (i.e. using the publicly available data) replicating as much as possible the ETS approach.

• Indicative datasets to be used: IPCC, OECD, IEA, international industry associations (e.g. world steel and international aluminium institute).
